Prototype scope sheet

Fill this in before anyone starts building. If a box is hard to fill, the prototype isn't ready to start.

1. The question
"We'll build this properly if we see…" Make it specific and observable.

2. The one flow
The shortest path that lets someone experience the idea. List the screens.

3. Leave out
Sign-up, settings, edge cases and anything else not on the flow.

4. What can be fake
Data, logic or integrations we'll stand in for.

5. Who sees it, and how
Five to ten named people, and how we'll watch them use it.

6. The stop signal
The result that tells us not to build this.

Want a second pair of eyes?

Got the scope? I'll turn it into a working prototype you can put in front of customers. Email alex@revarc.ai or visit revarc.ai/contact.
